

Android

Bring up the list of wireless of wireless networks and make sure that the 'eduroam' SSID is present.

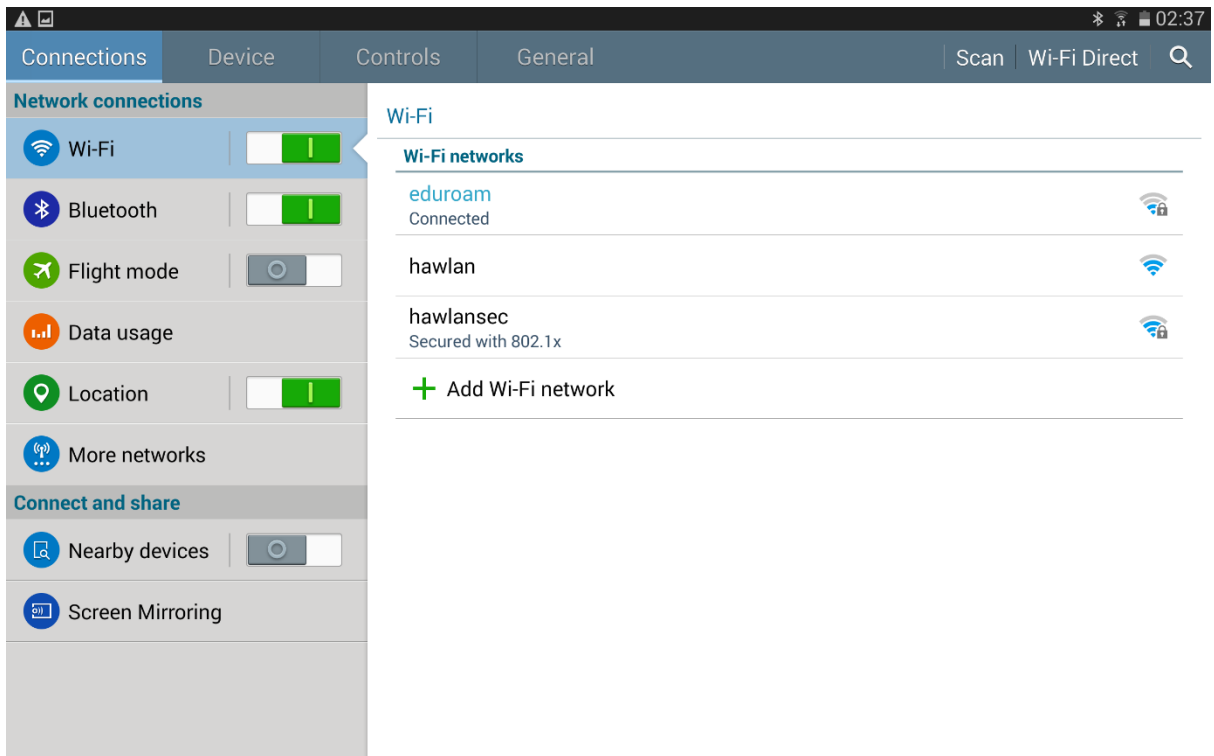

Click on 'eduroam'.

After clicking on 'eduroam' the authentication prompt will be displayed.

EAP method must be PEAP and Phase 2 Authentication must be MSCHAPv2. The identity must be the users' ID number with @harper-adams.ac.uk at the end of it and leave the anonymous identity blank. Eduroam will not work without the realm at the end of the username and the password must be the users' domain password.

Click 'Connect'

Once authenticated the user will then be connected to the 'eduroam' wireless network.

Open a browser and check Internet connectivity.
