

Apple OSX

Bring up the list of wireless networks and make sure that the 'eduroam' SSID is present.

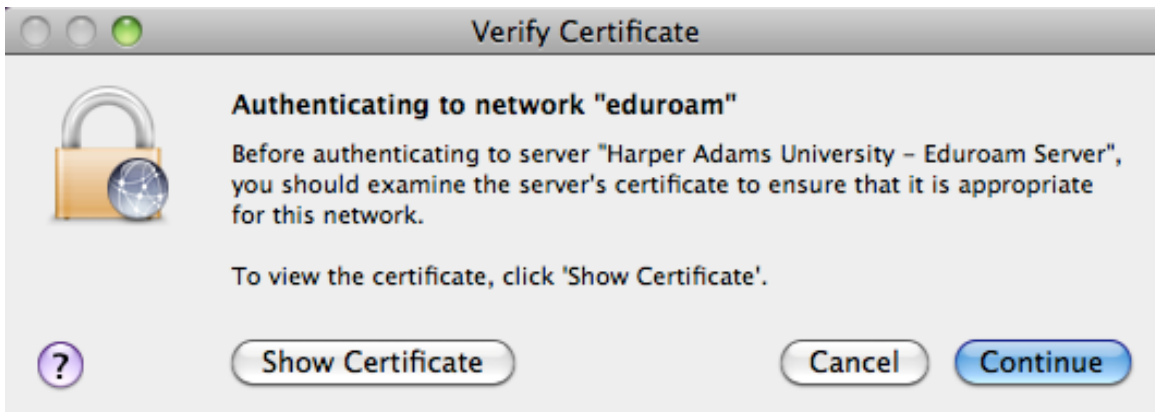

Click on 'eduroam'.

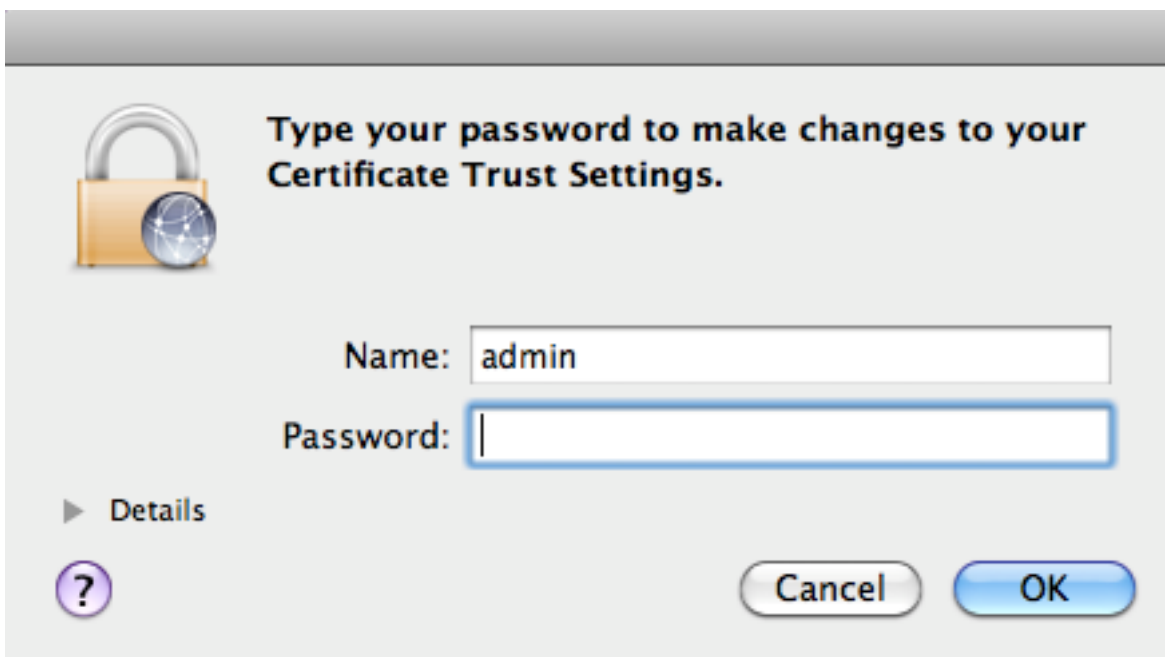

After clicking on 'eduroam' the authentication prompt will be displayed.

The username must be the users' ID number with @harper-adams.ac.uk at the end of it. Eduroam will not work without the realm at the end of the username.

The password must be the users' domain password.

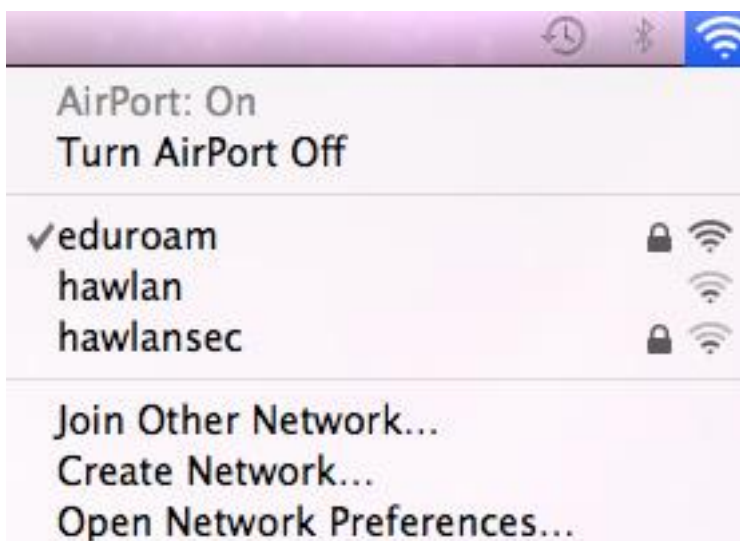

Once authenticated a certificate prompt will be displayed - Click on the 'Continue' button.

Depending on the security setting of the client you may be prompted to provide local administrative credentials allowing changed to the Certificate Trust Settings.

Enter the local administrative credentials and click 'OK'

The user will then be connected to the 'eduroam' wireless network.

Open a browser and check Internet connectivity.
