Local News

Future Farm Conference Success

The Future Farm team delivered an excellent and insightful conference recently, forming a key part of this year's Community Week.

Special thanks go to Grace Milburn & Lesley Spencer for their organisation and coordination of the event, as well as to the full line-up of speakers: Matthew Swaine, Chris Ruffley, Matt Bolton, Carrie Gauld, Alice Sault, and Steffan Newell. Their contributions helped create a programme that balanced academic perspectives with real-world professional insight.

The audience reflected the strength and diversity of the Harper Adams community, bringing together academic staff, professional services, technical teams, and students. This mix sparked valuable discussion and demonstrated the collaborative spirit that continues to drive Future Farm's work forward.

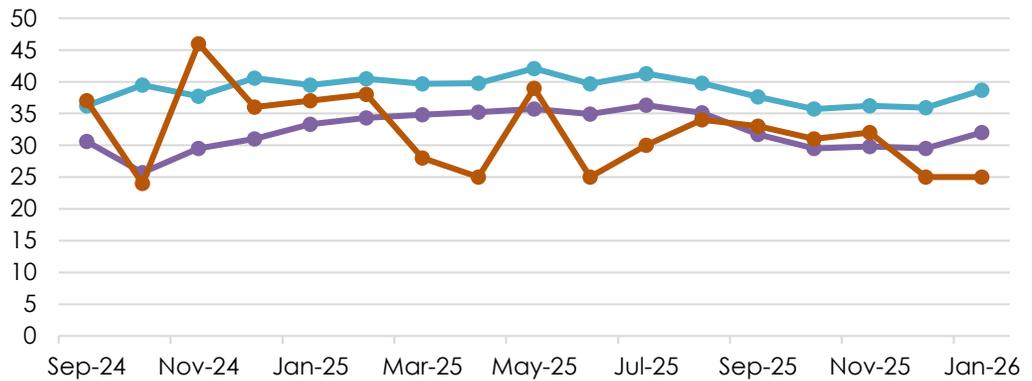

A huge well done to everyone involved for making the conference a real highlight of the week.

2. NatWest Warns 2026 Will Be a Defining Year for UK Farming – 2 January 2026

A new NatWest Agriculture Outlook report highlights that UK farmers are facing a pivotal year, driven by rapid changes in technology adoption, supply-chain transparency, workforce expectations, and succession planning. The report stresses that farms must adapt quickly to remain competitive amid structural changes in the sector.

Did You Know...

Livestock Farming Facts!

- ❖ A dairy cow's four-chambered stomach can ferment grass so efficiently that she produces enough energy each day to power a small fridge (if we could convert it directly!).
- ❖ Sheep have nearly 360-degree vision, meaning they can see behind themselves without turning their heads.
- ❖ Cattle form stable social groups and can recognise over 50 individual faces (both human and bovine), remembering them for years.
- ❖ Goats are natural climbers with excellent balance. They've been documented climbing trees and even balancing on branches to reach leaves.
- ❖ A single cow can produce 30–40 litres of manure per day.
- ❖ Chickens are surprisingly smart: they can count up to five, understand cause and effect, and communicate with over 30 distinct vocalisations.
- ❖ Grazing animals such as cattle and sheep help maintain rare habitats like chalk grasslands, which support more plant species per square metre than most rainforests.
- ❖ The microbial community inside a cow's rumen is so complex that researchers call it “a rainforest in a stomach”, and it's inspiring new biotechnology innovations.

Thank you for reading the Future Farm monthly update newsletter. If you have any feedback or would like to see something in upcoming updates, please send your request to futurefarmenquiries@harper-adams.ac.uk.

We apologise to anyone who made a suggestion for the newsletter, and the content you requested was not included. We are doing our best to gather this information about the farm and our practices. Check out our newly updated website:
